

CHAITANYA GIDIJALA

Java Developer | Spring Boot | Microservices | AI-Native Development | Kafka | REST APIs

+91 7337072766 | chaitugidijala@gmail.com | Hyderabad, Telangana, IN
[linkedin.com/in/chaitanya-gidijala](https://www.linkedin.com/in/chaitanya-gidijala) | github.com/chaitanya-gidijala | chaitanyatechworld.com

PROFESSIONAL SUMMARY

Java Developer with 2+ years of experience across the full Software Development Life Cycle (SDLC) — system design, development, testing, and operational support — building production Spring Boot microservices on an enterprise platform for GE Aerospace that processes 50,000+ daily transactions across US, UK, and India operations. Applies system design principles — service decomposition, caching, load balancing, database indexing/sharding, event-driven messaging, and API resiliency patterns (rate limiting, circuit breakers) — to build scalable, fault-tolerant systems, both on the client platform and on independently built projects. Uses enterprise-authorized AI coding tools (GitHub Copilot, agentic workflows) daily for scaffolding, code review, and test generation, applying responsible AI practices to validate data sensitivity and secure-coding compliance for every AI-generated change before merge. Enforces automated quality and deployment gates (SonarQube, Jenkins CI/CD) and partners directly with senior engineers on live production incident response and root-cause analysis. Comfortable working with architects, product owners, and cross-functional stakeholders to translate business requirements into secure, maintainable technical solutions.

CORE SKILLS

Languages: Java 17/21, SQL

System Design: Microservices decomposition & service boundaries, caching (Redis) & load balancing, database sharding/partitioning & indexing strategy, event-driven design, API rate limiting & circuit breakers, capacity estimation & high-level architecture design

Frameworks: Spring Boot 3.x, Spring MVC, Spring Data JPA, Hibernate ORM, RESTful APIs, Microservices Architecture, JDBC

Messaging & Streaming: Apache Kafka, RabbitMQ, event-driven architecture

Databases: MySQL, SQL query optimization, Redis (caching), JDBC

CI/CD & DevOps: Jenkins CI/CD pipeline design, automated deployment gates, Docker, Kubernetes (K8s), Helm Charts, SonarQube

Cloud & Security: AWS (EC2, S3, RDS, Lambda, CloudWatch), JWT, OAuth 2.0, RBAC, HTTPS/TLS, security testing, Swagger/OpenAPI 3.0

AI & Dev Tools: GitHub Copilot, agentic AI coding workflows, GenAI-based code review & test generation, JUnit 5, Mockito, Postman, Git/GitHub, IntelliJ IDEA, VS Code, Rally

PROFESSIONAL EXPERIENCE

Java Developer | Capgemini

Aug 2024 – Present

Client: GE Aerospace — enterprise Java/Spring Boot microservices platform, 50,000+ daily transactions across US, UK & India operations

- Owned the system design and end-to-end architecture of a core Spring Boot microservice supporting 50,000+ daily transactions across US, UK, and India operations, by defining service boundaries, a Redis caching strategy, and load-balancing/circuit-breaker patterns to handle peak load — driving it through the full SDLC using enterprise-grade AI coding tools (GitHub Copilot, agentic workflows), with every AI-generated change personally reviewed against secure coding standards.
- Built and maintained 15+ Spring Boot REST APIs for aircraft parts tracking and maintenance operations with 85%+ test coverage (measured by JUnit 5/Mockito reports), by applying Spring Data JPA/Hibernate for entity modeling and writing explicit security-focused test cases, including negative and invalid-input scenarios.
- Enforced quality and security-as-code standards on every release (measured by 100% of merges passing quality gates), by configuring a Jenkins CI/CD pipeline with automated SonarQube analysis as a hard deployment gate.
- Reduced API response latency by 50% (800ms → 400ms), measured by performance telemetry on high-volume endpoints, by applying system design and database optimization principles — composite indexing, query tuning, and connection-pool tuning.
- Strengthened application resiliency across 15+ production REST APIs (measured by standardized error-handling coverage), by designing centralized global exception handling with structured JSON error contracts and applying rate-limiting/circuit-breaker patterns to protect the platform from downstream failures.

- Cut deployment time by 80%, measured by pipeline execution time, by containerizing the microservice with Docker multi-stage builds and authoring a Kubernetes Helm chart for zero-downtime, resiliency-focused rolling deployments.
- Secured production APIs handling aerospace operational data by implementing JWT authentication, OAuth 2.0, and RBAC, and applying responsible AI review practices — validating data sensitivity, input/output handling, and secure-coding compliance — for every AI-assisted code change before merge.
- Partnered directly with senior engineers on live production incident triage and root-cause analysis, applying application resiliency principles to restore service within a regulated aerospace environment.
- Improved service decoupling and throughput, measured by reduced synchronous inter-service dependencies, by designing an event-driven architecture using Apache Kafka and Apache Flink for real-time stream processing.
- Accelerated cross-team technical alignment across US, UK, and India, by partnering with GE Aerospace architects and product owners in weekly system design reviews, translating business requirements into technical specifications early in the SDLC.
- Raised the team's certification pass rate by 75% (measured by pre/post results), by stepping up as COE Team Lead and running daily knowledge-transfer sessions on Docker, Kubernetes, Jenkins, and Helm for 7 junior developers.

Java Backend Developer (Independent Project) | Chaitanya Tech World

2024 – Present

AI Resume Builder · Job Portal · Photo Editor — chaitanyatechworld.com

- Designed the system architecture for a Resume Builder and Job Portal platform — database schema, caching layer, and indexing strategy — to support concurrent multi-user access, by applying Spring Data JPA/MySQL for data modeling and Redis caching for frequently-accessed job listings.
- Implemented JWT-based authentication with token generation, validation, and protected routes for the Job Portal's REST API layer.
- Built core J2EE components (Servlets, JSP, JDBC) for early iterations of the Job Portal, then redesigned the architecture and migrated the backend to Spring Boot — deepening foundational understanding of Java web fundamentals beneath the framework.
- Integrated the iText library for on-the-fly PDF resume generation and set up SLF4J/Logback logging for request tracing and debugging.

WebMethods AI (Independent Project) | Chaitanya Tech World

2026 – Present

AI-powered automation tool for webMethods Integration Server development

- Designed and built an AI-assisted tool that automatically generates webMethods IS packages and scaffolds their structure, cutting down manual package setup time for integration developers.
- Built an auto-documentation engine and an AI-driven error analyzer that parse package/flow-service structure and logs to generate technical documentation and surface likely root causes for common integration failures.
- Implemented an AI-based test case generator that produces functional test scenarios directly from package/service definitions to support QA and regression coverage.
- Applied microservices decomposition to separate the React.js frontend from Java Spring Boot REST API services, enabling each AI-powered feature to scale and deploy independently.

EDUCATION

Master of Computer Applications (MCA)

2024 – 2026 Andhra University, Visakhapatnam — CGPA: 8.6

Bachelor of Science, Computer Science

2019 – 2022 Dr. B.R. Ambedkar University, Sri GCSR College, Rajam — CGPA: 8.2

CERTIFICATIONS

- Microsoft GitHub Copilot for Software Engineering Practitioners (2026)
- GitHub Copilot Fundamentals: AI-Paired Programming (2026)
- Java OCEAN Certification Level 1 & Level 2 — Capgemini (2025, 2026)
- Java Full Stack Developer Certification — Frontlines Media Edutech Pvt. Ltd. (2024)
